

- * There is no hard evidence that cell phone use doesn't interfere with navigational instruments.
- * Cell phone use would enable terrorists to coordinate a plan of action more effectively.
- * The NPRM would leave it up to flight attendants to police the use of cell phones onboard the aircraft compromising our ability to maintain a safe, secure cabin environment and to conduct emergency evacuations.
- * It would make an already tense cabin environment even more stressful. Can you imagine the complaints that would come from customers whose seat mates are talking so loud they can't sleep or hear their own conversation on their cell phone? It's an accident/fight waiting to happen.
- * As it is, passengers barely pay attention to the departure announcements and safety demonstrations. Imagine all those people taking out their cell phones to make calls if we had a true emergency and were trying to prepare the cabin for an emergency landing.

Thanks for taking the time to protect our workplace.
